What We Do (and why it matters now)

Vikings of the Wire helps small and mid-size teams work better with AI so your tools remember what matters, waste less time, and produce clearer results.

We don't sell hype or heavy infrastructure. We install a practical collaboration protocol your team can use immediately in everyday work – emails, reports, planning creative, analysis – with no technical background required.

Our core offer is the AI fidelity Tune-Up: a focused 90-minute working session that reduces re-prompting, tightens intent, and locks progress into a repeatable handover so every session builds on the last. You leave with a simple system you can reuse week after week – not just tips.

What You'll Experience

Straightforward tools, real prompts, and practical language frameworks – so you can use it the same day.

Clarity Over Complexity

No jargon. We align on intent, tighten prompts, and set the rules that prevent drift.

Live, In Your Workflow

We work on your tasks in real time – emails, docs, briefs, analysis – so improvements are immediate.

Measurable Outcome

You leave with a simple protocol, a quality check, and a before/after you can use.
